

Dining With Gold — Email Marketing Knowledge Base

Owner: Dining With Gold (DWG)

Store: <https://diningwithgold.com> · Shopify (Basic plan, UK / GBP)

Prepared: 2026-06-01

Audience: Email marketing specialist / agency picking up DWG email

Purpose: Single source of truth for the welcome flow, the post-purchase review request, brand voice, setup steps, prerequisites, testing, deliverability and KPIs. Everything needed to build, run and extend DWG email without prior context on the brand.

1. Brand snapshot

Product	Travel-sized chilli oil. Bold, flavour-first, "small enough for your handbag."
Range	Travel Chilli Oil (single, £12), 2-Pack (£21.99), 3-Pack (£29.99), Home Jar (£25).
Founder / sender	Wura — founder & chef. <i>Wura</i> means "gold" in Yoruba. All emails are written first-person as Wura.
Market	UK-first (free UK shipping over £50). International travel/food-lover audience.
Positioning	"No bland plates allowed." Three chillies, salt, seasoning, vegetable oil — no fillers. Heat <i>with flavour</i> , made with intention.
Tone	Warm, personal, conversational, a little cheeky. Short punchy paragraphs. First-person founder voice. Sign-off is always "Come hungry, Wura — Founder, Dining With Gold."

Voice rules (keep these intact in any future email):

- Write as Wura, to one person, like a note across a kitchen table.
 - Short paragraphs, frequent line breaks, no corporate filler.
 - British spelling (flavour, colour).
 - One clear CTA per email.
 - End every email with the **"Come hungry, Wura"** sign-off.
-

2. Programs at a glance

DWG runs **two separate automations**. Do not merge them — different triggers.

Program	Trigger	Steps	Goal
A. Welcome flow	Customer subscribes to email marketing	3 emails: signup → Day 3 → Day 7	Introduce the founder & product, build trust, convert first order (WELCOME10).
B. Review request	Order fulfilled / delivered	1 email, +3 days after delivery	Collect reviews & surface issues for recovery.

Source copy files (plain text, paste-ready) live alongside this doc:

- `email-1-welcome.txt` , `email-2-day3.txt` , `email-3-day7.txt` (Program A)
 - `email-4-review-OPTIONAL.txt` (Program B)
 - `SETUP-GUIDE.md` (quick build steps)
-

3. Where to build it in Shopify (important platform note)

This store uses **Shopify Email** for automations. On this account, **Shopify Email** is surfaced *under the Shopify marketing/messaging app surface*, not as a standalone "Shopify Email" tile** — so:

- **Automations** lives at **Marketing** → **Automations** *once Shopify Email is present*. If the Automations tab seems missing, it's nested under the marketing app (the same surface as Shopify Inbox/Messaging), not absent.
 - App Store **search for "Shopify Email" is unreliable** (often returns Shopify Inbox). Use the direct link if you ever need to (re)install: `https://apps.shopify.com/email`.
 - **Account permissions matter**: the Automations tab and app install are hidden for staff/collaborator accounts lacking **"Manage and create marketing"** and **"Apps and channels"** permissions. Use the store-owner account or have those granted (Settings → Users and permissions).
 - **Region is fine**: store is registered UK (GB) / GBP, which fully supports Shopify Email. (Shopify Email gates on the *store's registered country*, not shipping destinations.)
-

4. PROGRAM A — Welcome Flow (build spec)

Trigger: *Customer subscribes to email marketing.*

Audience: New email subscribers (storefront footer signup, welcome popup, checkout opt-in).

Structure:

```
[Subscribe] → Email 1 (immediate)
            → Wait 3 days
            → Email 2
            → Wait 4 days      (3 + 4 = Day 7 from signup)
            → Email 3
```

Critical timing note: Shopify wait blocks are **cumulative between emails**. Email 3's wait is **+4 days after Email 2**, which lands on **Day 7 from signup** — NOT another 7 days. Setting it to 7 would push Email 3 to Day 10.

Email 1 — Immediate

- **Subject:** Welcome to my table
- **Preview text:** A small bottle. A big story. Come hungry.
- **CTA:** Step into the kitchen → → <https://diningwithgold.com>
- **Body:** see email-1-welcome.txt . Founder intro + origin story. No

personalization tags required.

Email 2 — Day 3

- **Subject:** Three chillies. One small bottle.
- **Preview text:** Why DWG isn't just another hot sauce.
- **CTA:** Try a bottle → → <https://diningwithgold.com/collections/all>
- **Body:** see email-2-day3.txt . Ingredients & product philosophy.

Email 3 — Day 7

- **Subject:** Two things people ask me most
- **Preview text:** Shipping, size, and why it fits in your handbag.
- **CTA:** Order your first bottle → → <https://diningwithgold.com/collections/all>
- **Body:** see email-3-day7.txt . FAQ (handbag size + shipping) and the

first-order offer.

- **Offer:** Code: WELCOME10 (10% off first order).

5. PROGRAM B — Post-purchase Review Request (build spec)

Trigger: *Order fulfilled* (ideally *delivered*, if a delivery event is available via your shipping/tracking app).

Send timing: **3 days after delivery confirmation.** Fallback: **7–10 days after order date** if delivery isn't tracked.

Build as its own automation — do NOT attach to the welcome flow.

- **Subject:** So... how was it?
- **Preview text:** Tell me what your plate thinks.
- **CTA:** Leave a quick review → → <https://diningwithgold.com/pages/reviews>
- **Personalization:** opens with Dear {{ first_name }} — insert via the

editor's **Insert** → **Customer first name** so it degrades gracefully when no name exists.

- **Body:** see `email-4-review-OPTIONAL.txt` . Note the built-in service-recovery line ("if something wasn't right with your order, just hit reply") — keep it; it catches dissatisfied customers before they leave a public 1-star.

Reviews destination note: `/pages/reviews` is currently the "Loved By You" video wall (social proof), not a structured review-collection form. If DWG wants star-rating capture, install a reviews app (e.g. Shopify Product Reviews alternative / Judge.me / Loox) and point this CTA at its submission link.

6. Prerequisites checklist (do BEFORE turning anything on)

- ☐ **WELCOME10 discount created** — Discounts → Create discount → 10% off, code `WELCOME10` . (Email 3 only prints the text; the code must exist.)

Decide: first-order only? min spend? expiry? — set guardrails.

- ☐ **Free shipping over £50 rate exists** — Settings → Shipping. Email 3 promises it; the rate must be real for UK.

- ☐ **Sender domain authenticated** — Settings → Notifications → Sender email. Authenticate `diningwithgold.com` (SPF/DKIM) for deliverability; otherwise Shopify sends via its shared domain (weaker inbox placement).

- ☐ **Subscription capture points live** — storefront footer signup, welcome

popup/banner, and checkout email-marketing opt-in all feed the same

"subscribed" trigger.

- ☐ **Consent compliance (UK GDPR / PECR)** — only email contacts with explicit marketing consent. Every email must carry a working unsubscribe (Shopify adds this automatically — don't remove it) and a physical business address in the footer.

7. Testing protocol

1. **Content QA:** use **Send test email** on each step. Check on desktop + mobile: subject, preview text, body line breaks, button links, sign-off, images.

1. **Link check:** click every CTA; confirm it lands on the right page and the `WELCOME10` code applies at checkout.

1. **Trigger test (end-to-end):** subscribe a Gmail alias (e.g. `name+dwgtest@gmail.com`) via the live storefront signup. Confirm Email 1 arrives immediately. (Manually adding a customer **without** marketing consent will NOT trigger the flow.)

1. **Timing sanity:** verify the wait blocks read **3 days** then **4 days**.

2. **Review flow:** place a test order, mark fulfilled/delivered, confirm the review email schedules to +3 days.

1. **Spam/inbox placement:** send tests to Gmail, Outlook and Apple Mail; watch for Promotions-tab vs spam.

8. Deliverability & list health

- Authenticate the sending domain (SPF + DKIM). Consider DMARC.
 - Warm up gradually if list volume jumps; avoid a cold blast to a large old list.
 - Keep a **sunset policy**: suppress contacts with no opens in ~6–12 months.
 - Monitor bounce + spam-complaint rates; keep complaints < 0.1%.
 - Never buy lists. Consent only.
-

9. KPIs & benchmarks

Track per email and per program. Rough DTC/food benchmarks (treat as directional, not targets — establish DWG's own baseline after 4–6 weeks):

Metric	Welcome-flow ballpark	Notes
Open rate	40–60% (Email 1 highest)	Welcome emails over-index; decay across steps is normal.
Click rate	5–15%	Driven by the single clear CTA.
Click-to-open	10–25%	
Placed-order rate (flow-attributed)	1–5%	Email 3 (offer) should carry most revenue.
Unsubscribe rate	< 0.5% per send	Spikes = frequency/relevance problem.
Review email response	1–5% of recipients	Lifts with incentive or one-tap rating.

Primary success metric: first-order conversion attributable to the welcome flow, and review volume from Program B.

10. Roadmap / expansion ideas (optional, after baseline)

- **Abandoned checkout** automation (highest-ROI flow after welcome).
- **Win-back** flow for lapsed buyers (60–90 days no purchase).
- **Post-first-purchase** cross-sell (single → bundle / Home Jar).
- **Recipe / usage** seasonal campaigns (eggs, jollof, pasta — reinforce "put it on anything").
- **Replenishment** nudge timed to typical bottle-finish window.
- A/B test subject lines on Email 1 and the offer in Email 3.

11. Reference

- **Store:** <https://diningwithgold.com>
- **Collections / shop link used in CTAs:** <https://diningwithgold.com/collections/all>
- **Reviews page:** <https://diningwithgold.com/pages/reviews>
- **Platform:** Shopify Basic (UK/GBP), Shopify Email for automations.

- **Copy files:** email-1-welcome.txt , email-2-day3.txt , email-3-day7.txt , email-4-review-OPTIONAL.txt (same folder as this doc).
- **Quick build steps:** SETUP-GUIDE.md .

Appendix — automation diagram

PROGRAM A: WELCOME

```
Subscribe → ✉ Email 1 "Welcome to my table" (t = 0)
           ⌚ wait 3 days
           ✉ Email 2 "Three chillies. One small bottle." (Day 3)
           ⌚ wait 4 days
           ✉ Email 3 "Two things people ask me most" (Day 7) ← WELCOME10
```

PROGRAM B: REVIEW (separate)

```
Order delivered → ⌚ wait 3 days → ✉ "So... how was it?"
```
