

DWG Welcome Email Flow — Setup Guide

A 3-step automated welcome sequence:

#	Email	When it sends	File
1	Welcome to my table	Immediately on signup	email-1-welcome.txt
2	Three chillies. One small bottle.	Day 3	email-2-day3.txt
3	Two things people ask me most	Day 7	email-3-day7.txt

A 4th email (email-4-review-OPTIONAL.txt) is a **separate** post-delivery review request — build it on its own with an "Order fulfilled" trigger, not in this flow.

Build it in Shopify (Marketing → Automations)

This must be done in the Admin UI — Shopify has no API to create automations.

1. **Shopify admin** → **Messaging** → **Automations** → **Create automation**.
2. Pick **"Welcome new subscribers"** (a pre-built template that triggers on

Customer subscribed to email). If you'd rather build from scratch, choose

Create custom automation and set the trigger to **Customer subscribed**.

1. You'll land on the flow canvas. It usually starts: **Trigger** → **Send email**.

Email 1 (immediate)

1. Click the **Send email** block → **Edit email content**.
2. Set **Subject** and **Preview text** from email-1-welcome.txt .
3. Drop a **Text** section and paste the body. Add a **Button** section where the

[BUTTON] line is → label Step into the kitchen → , link

https://diningwithgold.com .

1. Save.

Wait → Email 2 (Day 3)

1. Below Email 1, click + → add a **Wait / Time delay** → set **3 days**.
2. Add another **Send email** block → paste email-2-day3.txt

(subject, preview, body, button → https://diningwithgold.com/collections/all).

Wait → Email 3 (Day 7)

1. Add another **Wait / Time delay** → **4 days** (3 + 4 = Day 7 from signup).

2. Add a **Send email** block → paste `email-3-day7.txt`

(button → `https://diningwithgold.com/collections/all`).

1. **Turn the automation ON** (top-right toggle).

Notes / gotchas

- **Delays are cumulative.** Email 2 waits 3 days from signup; Email 3's delay is

4 days after Email 2, landing on Day 7 — not another 7.

- **First name:** the welcome emails don't use a name tag, so no personalization is needed. The optional review email does — insert it via the editor's

Insert → **Customer first name** so it degrades gracefully.

- **WELCOME10 discount (Email 3):** create the code first under

Discounts → **Create discount** → **10% off**, code `WELCOME10`. The email just prints the text; it doesn't generate the code.

- **Free shipping over £50 (Email 3 copy):** make sure a matching shipping rate exists under **Settings** → **Shipping** so the promise is true.

- **Sender domain:** for best deliverability, verify your sending domain under **Settings** → **Notifications** → **Sender email** (otherwise Shopify sends via its shared domain).

- **Test first:** use **Send test email** on each step before switching the automation on.
